HAY lighting

HAY's lighting collection is an extensive selection of carefully curated designs that offer sustainable and innovative lighting solutions by some of the world's best contemporary designers. In our endeavour to create longer lasting and more energy-efficient lights that are accessible to the widest possible audience, we exclusively use LED light sources and strive to match affordability with functionality and originality.

HAY Lighting prioritises versatility, aiming to satisfy the needs of a range of environments, from the domestic to the professional and the public, often serving multiple functions.

Nikolaj Lorentz Mentze is a Danish designer and the owner of Copenhagen-based architecture and design firm STUDIO 0405.

Apollo Portable

Design by STUDIO 0405

Designed by STUDIO 0405, the Apollo Lamp is a portable and free-standing lamp for indoor and outdoor use that creates space and intimacy wherever it is placed. Hand-made in a single piece of opal glass, its rounded curves and unified silhouette are a contemporary interpretation of the classic lamp form. The light source and rechargeable battery are concealed within the shade, illuminating the upper part to provide a warm, ambient glow. Apollo's portability and deliberate simplicity of design make it suitable for using in many rooms in a domestic environment, as well as cafés, patios and other outdoor spaces.

For HAY, Muller Van Severen has designed the Arcs Lamp Shades, Arcs Vases, Arcs Candleholders and Two-Colour Tables.

Arcs

Design by Muller Van Severen

Created for HAY by Belgian duo Muller Van Severen, Arcs reflects the designers' love of showcasing materials by focusing on simple, elemental shapes and the intensity of colour in an object. Arcs is a series of lighting designs formed from a continuous chain of curved arches that form a single element, using spatial volume to create a scalloped silhouette. Arcs is made from steel and comes in a choice of vibrant colours or with a mirror surface that reflects and magnifies the natural light. The different variants and mounting solutions give Arcs a versatile quality that makes it easy to integrate in most interior spaces.

Muller Van Severen was founded in 2011 by Belgian artist duo Fien Muller and Hannes Van Severen. The couple has always been on an inspired quest for sculpturally interesting furniture objects, and their work sits somewhere between design and art, drawing on their passion for architecture and materials. They have won countless awards and collaborated with prestigious international museums and galleries.

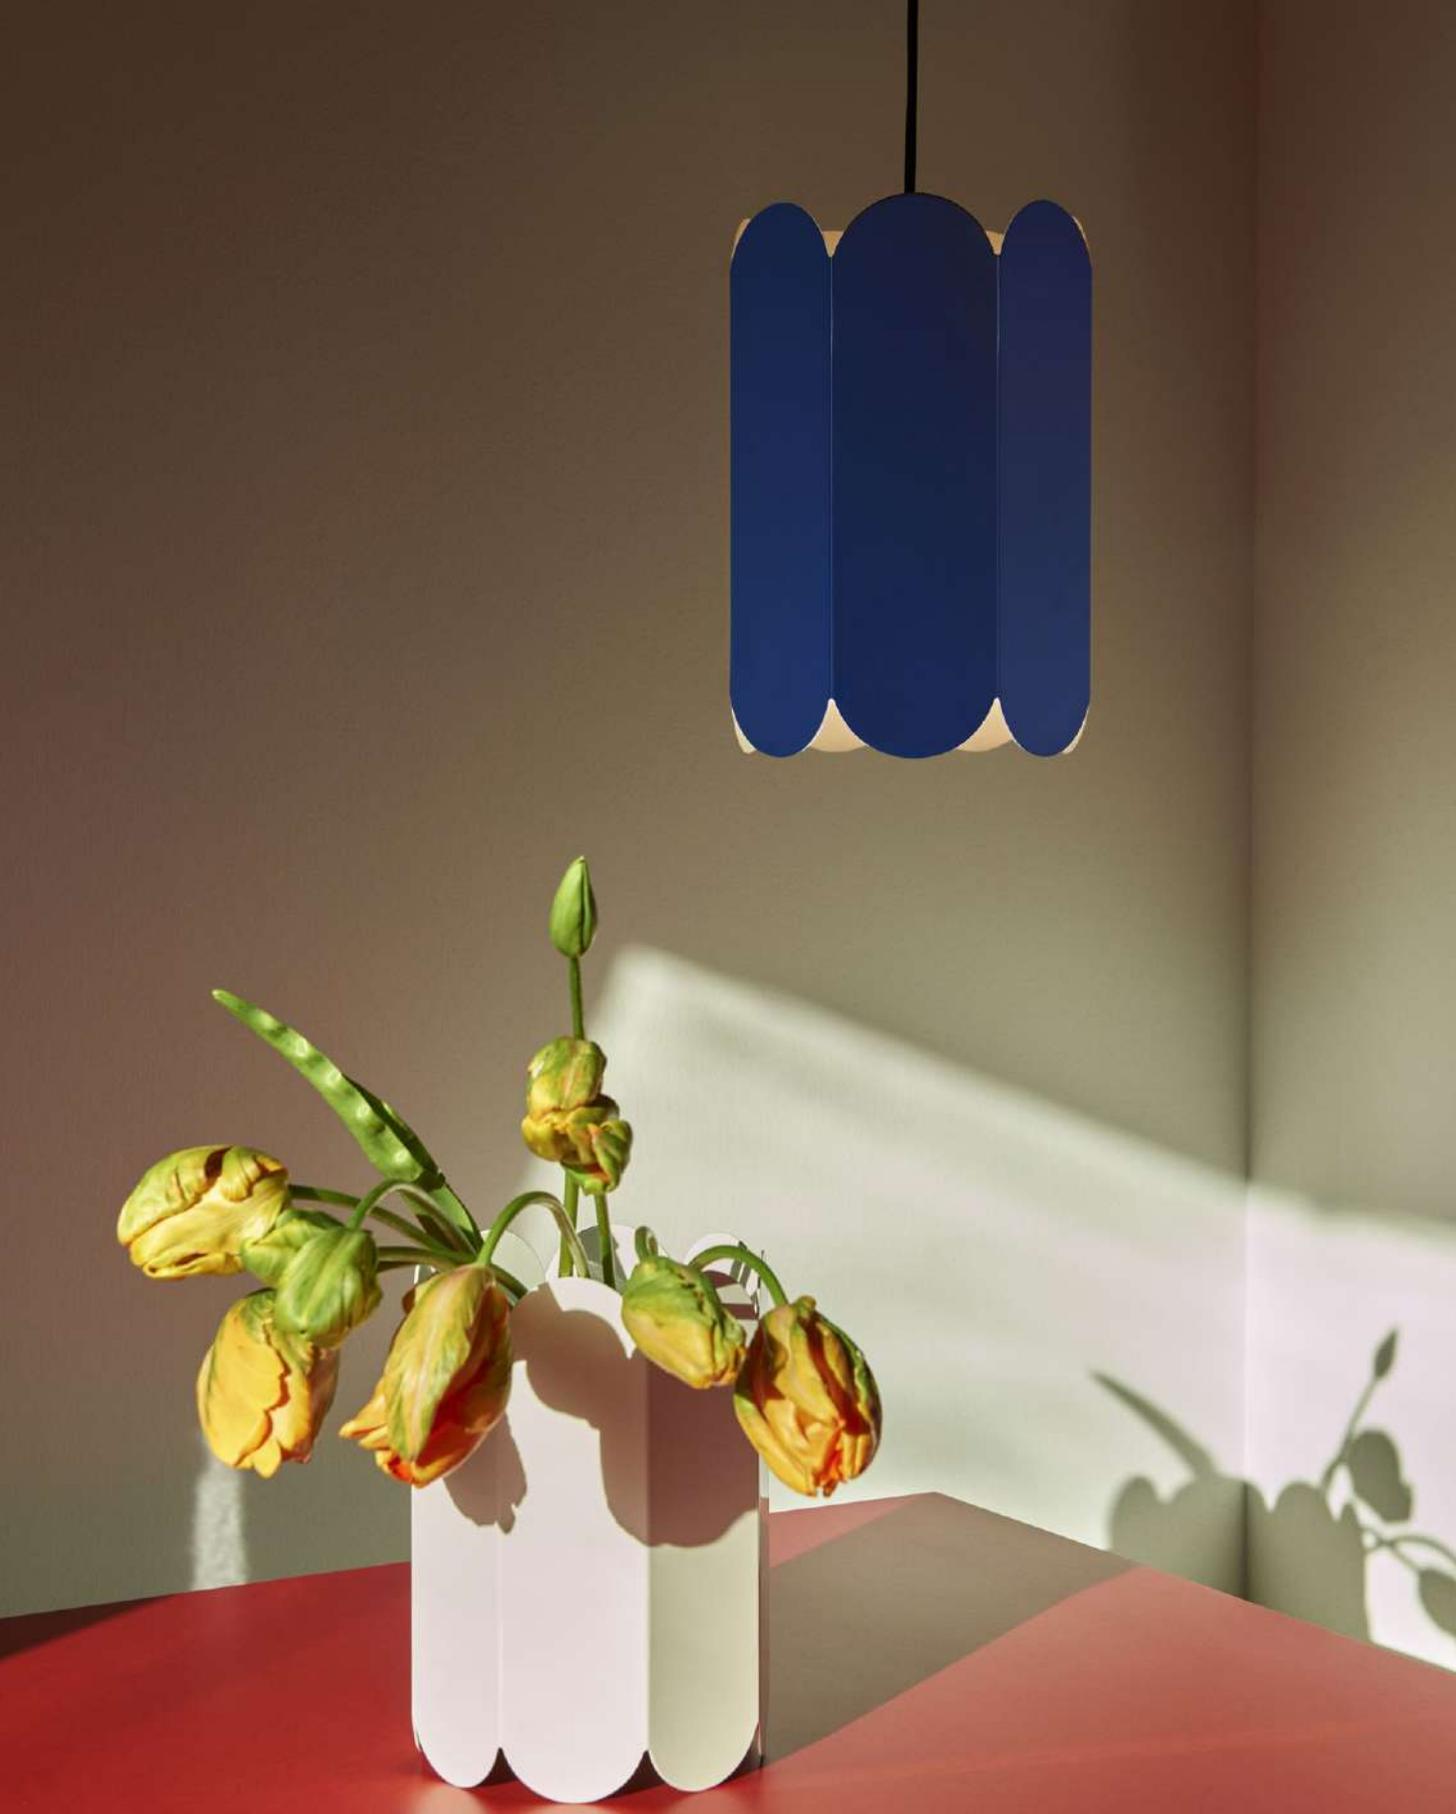

A shared love of colour and materials is often the inspiration behind many of Muller Van Severen's designs. The designer duo is constantly seeking new ways to present the natural beauty of the materials they use, striving to give the materials their own distinct presence.

Formed from a continuous chain of curved arches that form a single element, the Arcs Shade creates a spatial volume that plays with light and shape.

Team BRANCH at Tama Art University, located in western Tokyo.

Slant

Design by BRANCH

Slant is the result of a collaborative project between HAY and BRANCH – a design team comprising Japanese Tsunao Nagasaki together with graduates and students of Tama Art University's Department of Integrated Design, where he used to teach. Inspired by the power of shapes and how they impact their surroundings, the Slant Lamp features a bold graphic aesthetic that takes possession of the space it occupies. Comprising a simple, slanted cylindrical form with a weighted base to keep the angle perfectly balanced, all components are concealed within to retain the clean, elemental silhouette. Slant's sculptural design and functional, directional light make it suitable for a variety of home and office settings.

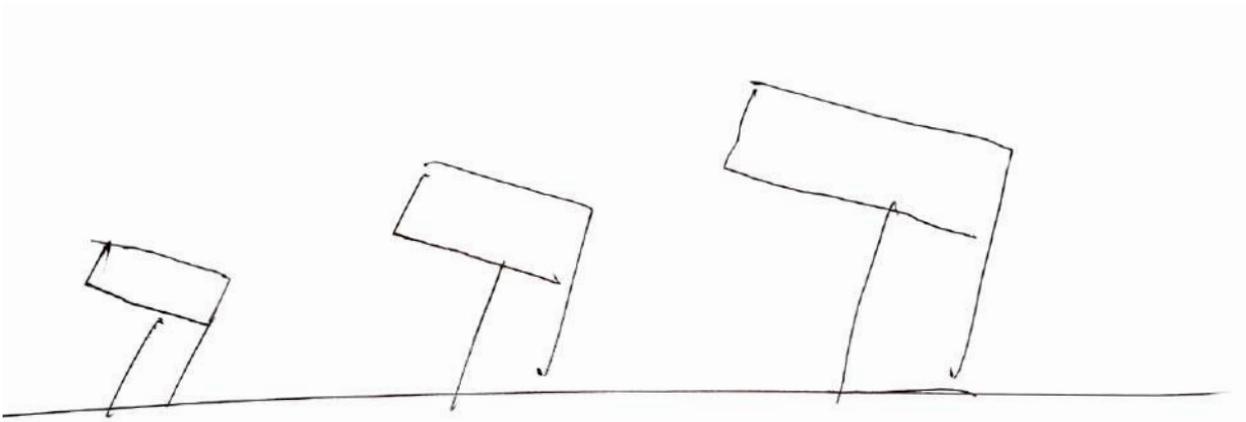

BRANCH is a creative unit that explores the relationship between the world (the environment), people and objects from the multiple perspectives of art, science and design. BRANCH is based in the Department of Integrated Design at Tama Art University in Japan.

A cast iron weight creates stability in the base, whilst ensuring the tilted angle remains perfectly balanced.

Branch design team comprises Tsunao Nagasaki, along with graduates and current students at Tama Art University's Department of Integrated Design.

The team decided to scale the lamp up from the original design and create more of a statement piece.

Pao draws on Fukasawa's aesthetic of beautiful simplicity; creating an everyday object that draws on design values existing in the natural world.

Pao

Design by Naoto Fukasawa

The Pao collection of lamps is an exciting collaboration with established Japanese designer Naoto Fukasawa. The Pao lamps draw on Fukasawa's "super normal" aesthetic of beautiful simplicity, everyday objects that draw on design values existing in the natural world. The inspiration for the form of these lamps came from a trip to Mongolia, where traditional nomadic tents, referred to locally as a 'Yurt' or in Japanese 'Pao', illuminated the landscape at night. Fukasawa was drawn to the glowing shape, which suggested comfort and warmth and the safety of "home," and represented a universal symbol he felt every person would find familiar in an intuitive way.

Japanese designer Naoto Fukasawa established NAOTO FUKASAWA DESIGN in 2003. His designs are known for their ability to access and communicate the true essence of an object. His designs span a wide variety of fields, from precision electronic equipment to furniture and interior spaces.

Named after the soft, glowing shape of traditional Mongolian Pao tents illuminated at night-time.

The table lamp is made in opal glass, while the pendants are available in opal glass or steel with a high-gloss finish in different sizes and colours.

Sempé was inspired by ribbon shops in Paris to create a vast array of appealing colours for the shade.

Matin

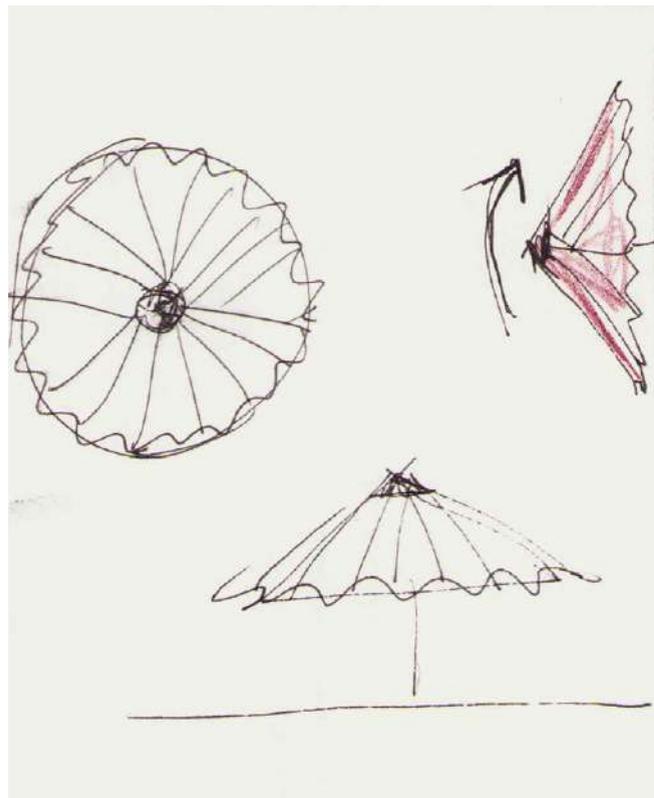

Design by Inga Sempé

With its romantic shade and clean, contemporary base, The Matin table lamp offers a sleek yet poetic design. Its construction combines visual delicacy with physical robustness, making it as versatile as it is unique. It consists of a steel-wire bent frame finished in polished brass with matte-black hardware, and is paired with a pleated cotton shade in a variety of vibrant colours. The light source is an integrated LED, offering a diffused downlight which is accompanied by a digital in-line dimmer control to adjust the output of light if required.

French designer Inga Sempé is known for a lightness of touch, for a strong personality and for a particularly tactile nature. The idea of everyday use is at the centre of her approach, and she often seeks out materials with special properties to answer the need of a daily function. For HAY, Sempé has created Pandarine, Panier, Fonte Candleholder, Matin, Pinorama and Ruban.

Matin comes flat-packed and is easy to assemble. The light source is an integrated LED.

The wall lamp has an adjustable head that can easily be angled to direct light up and down.

Pierre's research on form and color characterize his work and can be seen in both, limited edition products and industrial products like the PC lamp.

PC

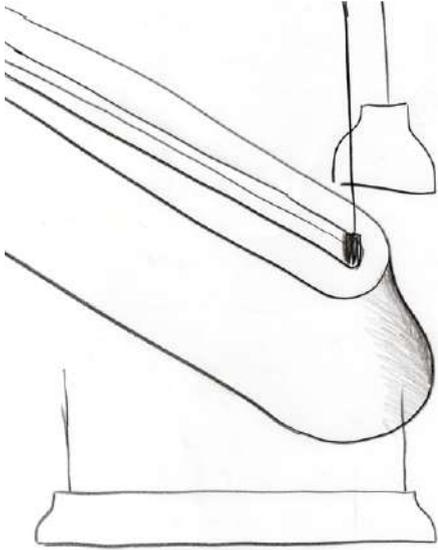

Design by Pierre Charpin

Pierre Charpin's PC lamp series is a family of refined and precisely engineered multifunctional lamps, featuring a variety of designs and functions. The collection includes variants with single- and double arms, as well as free-standing, desk, clamp, suspended, and wall-mounted lights, as well as a portable outdoor model, the PC Portable. Common to all designs is the designer's intention to keep the object as visually simple as possible, making sure technical components are kept out of view.

Paris-based designer Pierre Charpin's approach is strongly influenced by his artistic background, notably his research into form and colour. Known for both limited-edition and industrial products, he ensures that every item he makes is simple, clean, and functional, so it suits public, professional, and private environments.

The PC Portable provides up to 10 hours of light, and is perfect for outdoor as well as indoor use.

All of the lights in the iconic PC Lamp series share the line's signature tulip-shaped shade, and easily integrate into any environment.

Jeppe Hein, Semicircular Mirror Labyrinth II, 2013

Inspired by her drawings, Ana Kraš' Bonbon Shades are produced using an original technique to create textured, one-of-a-kind pieces.

Bonbon

Design by Ana Kraš

Inspired by her drawings, Ana Kraš' woven Bonbon Shades are produced using an original technique to create textured, one-of-a-kind pieces. Every shade is hand woven with nylon-wool yarn around a powder-coated steel frame, resulting in individual lampshades that vary slightly in their appearance and surface aesthetic. Bonbon is available either as a table/floor lamp or as a pendant, depending on the chosen cord set, but it stands on its own as a powerful decorative object even when the bulb is not switched on.

Born in Belgrade, Serbia, in 1984, Ana Kraš studied furniture design and interior architecture at the University of Applied Arts in Belgrade. In 2013, she moved to New York, where she has continued pursuing various projects in the fields of object design, art, photography, and fashion. Her work has been exhibited in numerous solo and group exhibitions around the world, and featured in many international publications. For HAY, Ana has designed the Bonbon Lamp and the Perla Phone Holder.

Bonbon is a compelling artwork or design object.

George Nelson, Courtesy Hermann Miller inc.

Nelson Bubble

For Herman Miller, available from HAY

Design by George Nelson

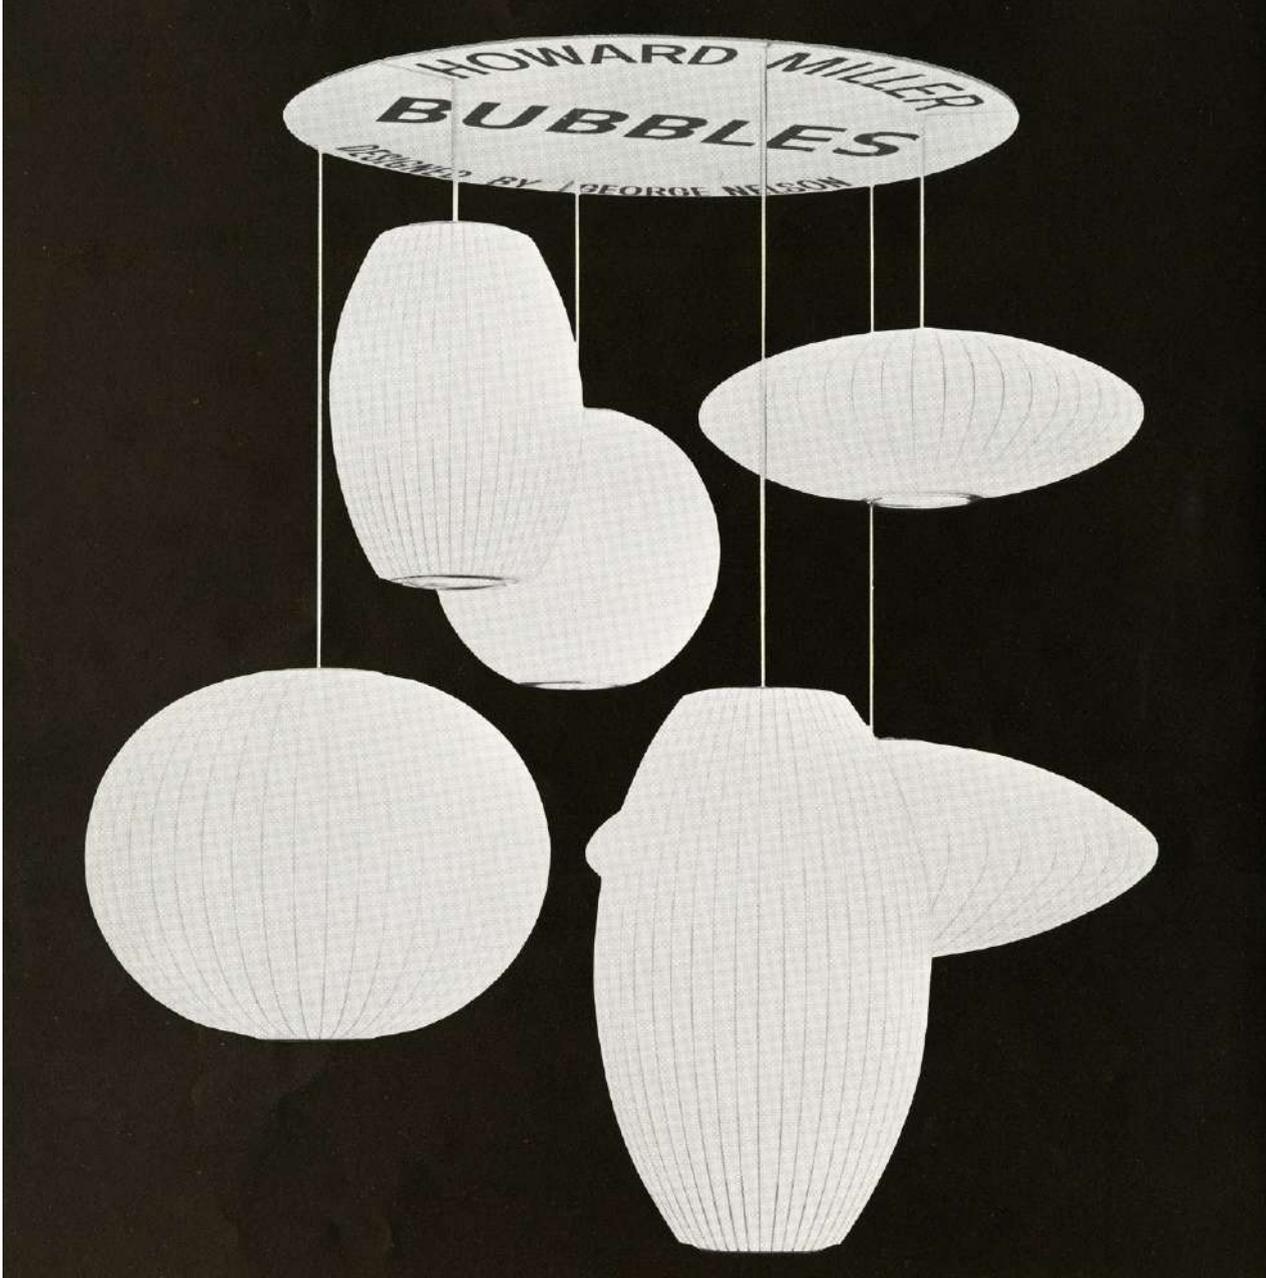

Designed by pioneering American designer George Nelson in 1947, the Bubble Lamp represents an iconic moment in the history of design. Produced using a technique that was extremely innovative at the time, these elegant, floating orbs are lightweight and versatile. They are available from HAY in both pendant and wall-lamp styles and an assortment of sizes and shapes, enabling our customers to enjoy the soft glow of Nelson's revolutionary design in their own homes.

George Nelson was one of the most influential figures in the crucial early period of modern design. Trained at Yale as an architect and a fine artist, he believed that a designer's job was to better the world, using the perfection of nature's creations as his guide. Nelson's creation of the Bubble Lamp was inspired by a set of silk-covered Swedish pendant lamps he wanted for his office, but found to be too expensive.

Designed by pioneering American designer George Nelson in 1947, the Bubble Lamp signaled a revolution in the Modernist lighting industry.

A multifunctional collection of floor, table and wall mounted lamps.

Fifty-Fifty

Design by Sam Weller

Designed by Sam Weller and named Fifty-Fifty after a counterweight system that creates equilibrium between its two parts, this lamp makes clear references to physics and engineering. Configurable aluminium components minimise the overall complexity of the design and manufacturing process, transforming its joints and mechanisms into distinctive design features that are consistent throughout the entire series. The single cantilever arm is easy to tilt and pivot with one hand, featuring a touch-sensitive dimmer switch. The collection comprises table and floor lamps with weighted bases in large and small sizes.

Copenhagen-based designer Sam Weller was born in Bath (UK) in 1985. With a background in Industrial Design and Engineering, he went on to study at the Royal College of Art in London, graduating in 2012 with a Master of Arts in Design Products. He later joined a small London-based workshop space to begin cultivating his own ideas and developments, and has lived and worked around the world in the UK, US and Asia. Sam's design work aims to be timeless and honest, focusing on a pared-back aesthetic that reflects a product's material selection and function.

Fifty-Fifty Floor

Fifty-Fifty Mini

Fifty-Fifty Table

kaschkasch designs are characterised by a fine balance of functionality and aesthetics, resulting in innovative modular designs with a timeless quality.

Marselis

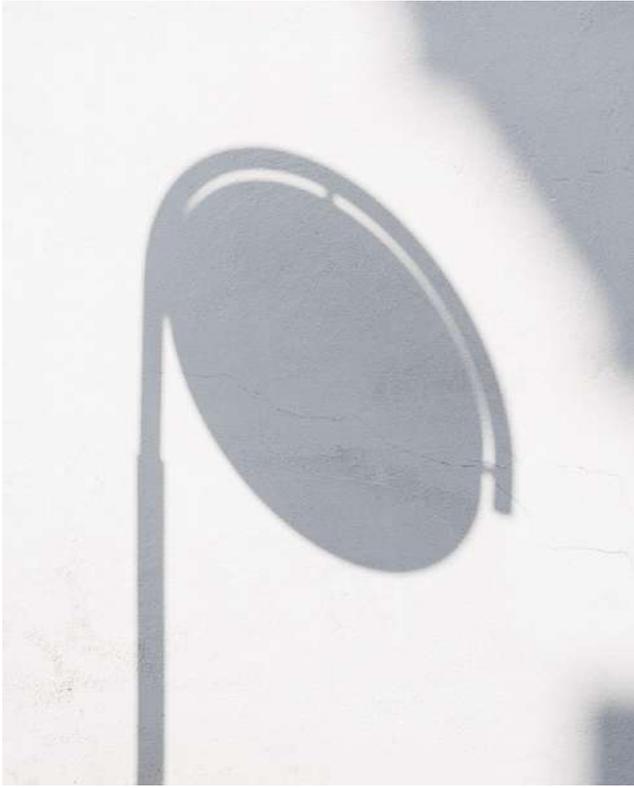

Design by kaschkasch

Inspired by the bent tubing around local Danish street signs, design duo kaschkasch has created a family of table and floor lamps sharing the same arched silhouette. The light source comes from a tilting circular disc, which can be adjusted to create both an indirect ambient and a direct task-light beam. The lamp body is crafted from powder-coated, die-cast aluminium and steel, and the light source is an opalescent, injection-moulded polycarbonate lens that conceals a flat panel of light. Both lamp designs are available in different colours and are suitable for a variety of private and corporate settings.

Design duo kaschkasch prioritises function while paying careful attention to aesthetic. The Marselis lamp has a clean, simple expression and form while featuring an especially mobile head, so it can create direct or indirect light. It is perfect for placement on a desk, ledge, bedside table, or sideboard.

kaschkasch was inspired by the bent tubing around street signs in their creation of the Marselis lamp.

Marselis Floor Lamp

Marselis Floor Lamp

Rope Trick is a versatile contemporary floor lamp that can be adjusted to suit a user's needs.

Rope Trick

Design by Stefan Diez

With its high-quality and progressive design, Rope Trick has been selected for inclusion in MoMA's permanent collection of design objects. Its innovative construction integrates LED technology within a dynamic new tailored form, and is made from a range of modern materials, including an internal plastic skeleton and woven PET for the light's arm, molded ABS for the base, and a specially designed aluminium LED module for dissipating heat. The acrylic shade can slide along the neck of the light in a flexible way. This allows diffused light to be directed to different places in a room, producing a range of effects from a low-level ambient light to full brightness. The dimmer with memory adds to the sense that this design is at the vanguard of lighting technology.

Stefan Diez is a Munich-based, German industrial designer who founded his studio in 2003. The son of a cabinetmaker, where he received his earliest training, his approach to design is always firmly rooted in the workshop, where he gets to indulge his passion for material experimentation. Diez takes a future-facing approach to design, striving to create durable, quality products for generations to come. For HAY, he has also designed the New Order Shelving System and the New Order Table.

Rope Trick

Rope Trick

With its elegant, blown-glass shade, Turn On sits beautifully on a desk, bedside table, or shelf.

Turn On

Design by Joel Hoff

This beautifully unified piece of design, produced in aluminium and opal glass, is made at human scale, effortlessly simple and pleasing to touch. The base is a faceted cylinder that works as both the light switch and the stem, which holds the spherical glass diffuser in place. Turning the base in a clockwise direction clicks the LED light on, with further rotation increasing the lumen output. Integrating movement into the design allows the user to intuitively brighten or dim the light. The base comes in four anodised finishes: black, aluminium, orange, and green.

Joel Hoff graduated from the Royal College of Art in London in 2014 with a Master in Design Products. His aim is to design objects for mass-production that do not fuel mass-consumption: to inspire people to own fewer things of greater quality, which remain in use for longer. Through an understanding of manufacturing processes and their many different advantages and limitations, he wishes to foster longevity in terms of both materials and form.

Turn On

Turn On

Turn On

Turn On

With its clean, simple aesthetic that will stand the test of time, Noc is a perfect addition to any reading nook or bedroom.

Noc

Design by SmithMatthia

The Noc Lamp series is a family of adaptable lights made from die-cast aluminium with a faceted shade and a smooth, powder-coated finish. It is available in three models: a universal clamp light called the Noc Clamp, for use on tabletops, shelves, and headboards; the Noc Wall, featuring a cable and inline-rocker switch; and the Noc Wall Button, which conceals the cable inside the wall and features a touch-switch located on the base. This versatile series is designed for everyday use in both domestic and commercial settings.

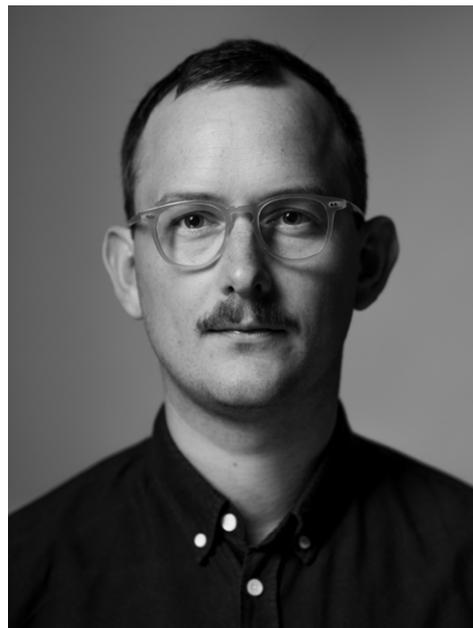

London-based designers Jack Smith and Gemma Matthias take a responsible approach to their design work, which means that they design for the “long term.” Having worked for several architects and design practices, their shared knowledge of manufacturing and their passion for enduring products has led them to a utilitarian approach to contemporary design: they strive to create products that people can connect to, and that will be a pleasure to experience and use.

Noc Wall

Noc Clamp

Fjetland's work marries functional Scandinavian design with organic shapes and materials.

Cloche

Design by Lars Beller Fjetland

Cloche is a table-top lamp that provides a directional light. Its black, powder-coated arm and off-set, cast-iron base create a visual imbalance, resembling the suspension of a traditional dining cloche.

Norwegian designer Lars Beller Fjetland established his own studio in 2011. He studied furniture and spatial design at the Bergen National Academy of the Arts, graduating in 2012. His approach to design is characterised by a fascination with nature, a desire to use disparate materials in combination, and a general sense of exploration. He particularly enjoys prototyping and the deep level investigation of material and form this allows. For HAY, he has also designed the Moment Candle Holder.

Cloche

Cloche

The shade of 30 Degrees appears to be made from a continuous plane of wood grain without seam or interruption.

30 Degrees

Design by Johan Van Hengel

30 Degrees is a lightweight shade made of laminated oak veneer. The seamless surface is achieved by aligning the ends of semicircular veneer sheets at a 30-degree angle, so the inside cone and internal angle always maintain a 30-degree relationship. The layering of the conical veneer creates a solid shade that is opaque, characterized by its harmonious woodgrain pattern. Rich in tactility, the series express an organic yet elegant aesthetic. 30 Degrees comes with Cord Set.

Johan van Hengel is a Rotterdam-based product designer with a technical background in industrial design. Johan studied Industrial Product Design at The Hague University of Applied Sciences in the Netherlands. In 2013, Johan launched his own studio with a focus on furniture, lighting, and everyday objects. Johan's problem-solving nature and attention to function, materiality, and technique in his design has led to honours from the Elle Decoration Talent Award (2010) to the IF design award (2016).
